

Expense reports on Power Apps.

From the photo of the receipt to approval and reimbursement, in one app.

Expense reporting is the process nobody wants to do: receipts in envelopes, spreadsheets going back and forth and approvals lost in email. We close it in one app on the Microsoft 365 you already own — from the employee's phone to payroll.

THE FLOW, IN FOUR STEPS

WHAT IT INCLUDES

- **Photo receipts**
A photo or scan accompanies every expense and is archived automatically — no more envelopes.
- **Limits & expense policy**
Daily limits, allowed categories and mandatory supporting documents, inside the app.
- **Expense reporting**
Totals per department, project, category and employee, exported to Excel or Power BI.
- **Approval flows**
Rules by amount, category, department or project, with multiple levels, delegation and reminders.
- **Mobile from day one**
A Canvas app on phone and tablet with camera; the same app on desktop.
- **Your data**
Everything stays in your tenant — SharePoint at no extra cost, or Dataverse for larger scale.

TWO EDITIONS

- Canvas + SharePoint — fast start, no extra cost
- Model-driven + Dataverse — strict permissions and scale
- Connects to Dynamics 365 and your ERP
- Interactive demos for both at bvc.gr

TECHNOLOGY

- Power Apps Canvas
- Model-Driven Apps
- Power Automate
- SharePoint · Dataverse
- Power BI

Demo: See them live: bvc.gr/expenses.html — interactive demos of the Canvas and model-driven editions, on desktop and mobile.
